7-2 External output function .....	39
Appendix 1 : Initial setting(adridged) .....	40
Appendix 2 : User operation(adridged) .....	42

Before using the controller, please read this Instruction Book carefully to ensure correct operation. Store this Instruction Book in a location that is easy to find.

# 1 . SAFETY

Please take a moment to review these safety precautions. They are provided for your protection and to prevent damage to the controller.

This safety information applies to all operators and service personnel.

After you have read this manual, always observe the procedures described in the explanations and store it with the installation manual in a location that is easy to find. If the controller is going to be operated by another person, make sure that this manual is given to them.

## Symbols and Terms

 <b>WARNING</b>	Statements identify condition or practices that could result in personal injury or loss of life.
 <b>CAUTION</b>	Statements identify condition or practices that could result in damage to the controller or other property.

## Specific Precautions

 <b>WARNING</b>	
<ul style="list-style-type: none"><li>• <b>Ask your dealer or technical representative to install.</b> If incorrect installation is done by a customer, it may cause an electric shock, fire, etc.</li></ul>	<ul style="list-style-type: none"><li>• <b>Do not move and re-install the controller by yourself.</b> If installation is incorrect, it may cause an electric shock, fire, etc. Ask your dealer or technical representative.</li></ul>
<ul style="list-style-type: none"><li>• <b>Securely install in a place which can withstand the weight of the controller.</b> If it is not enough, the controller may fall and cause an injury.</li></ul>	<ul style="list-style-type: none"><li>• <b>Contact your dealer if the controller will not be used any more or will be scrapped.</b></li></ul>
<ul style="list-style-type: none"><li>• <b>Make sure that the controller is connected to a rated power supply.</b> If the controller is not connected to a rated power supply, it may cause a fire or damage to the controller.</li></ul>	<ul style="list-style-type: none"><li>• <b>Do not remodel or repair by yourself.</b> If the controller is redesigned or repair is not correct, it may cause an electric shock, fire, etc. Consult your dealer if repair is necessary.</li></ul>
<ul style="list-style-type: none"><li>• <b>Never remove the cover during operation.</b> Touching the charged parts of the controller may cause severe burns or other personal injury.</li></ul>	<ul style="list-style-type: none"><li>• <b>Stop the operation immediately and notify the your dealer if an error code is displayed or malfunction occurs.</b> Fire or damage may be caused if the controller is operated in this condition .</li></ul>
<ul style="list-style-type: none"><li>• <b>Stop the operation if any malfunction occurs.</b> If malfunction occurs (burning smell, etc.) stop the operation and turn off the power supply. Contact your dealer or technical representative immediately. If the controller continues to operate after a malfunction occurs, this may cause damage, electric shock or fire.</li></ul>	

 <b>CAUTION</b>	
<ul style="list-style-type: none"><li>• <b>Do not install the controller in a place where inflammable gas could leak.</b> If gas leaks and collects around the controller, it may cause a fire or explosion.</li></ul>	<ul style="list-style-type: none"><li>• <b>Do not use the controller in special environments.</b> The performance may be reduce or parts may be damaged if the controller is used in locations subject to large quantities of oil (including machine oil), steam, sulfide gas.</li></ul>
<ul style="list-style-type: none"><li>• <b>Do not wash the controller with water.</b> It may cause an electric shock or malfunction.</li></ul>	<ul style="list-style-type: none"><li>• <b>Do not touch the switches with sharp objects.</b> It may cause an electric shock or malfunction.</li></ul>
<ul style="list-style-type: none"><li>• <b>Do not touch the switch with wet hands.</b> It may cause an electric shock.</li></ul>	<ul style="list-style-type: none"><li>• <b>Operate the controller within the specified temperature range.</b> Observe the specified temperature range when operating the controller. If the controller is used outside the specified temperature range, it may cause serious damage. Be sure to check the operation temperature range in the operation manual.</li></ul>
<ul style="list-style-type: none"><li>• <b>Do not use the controller for special applications.</b> This product is designed for use with the MITSUBISHI ELECTRIC BUILDING AIR CONDITIONING CONTROL SYSTEM. Do not use the system for other air condition management operation or applications. It may cause malfunctions.</li></ul>	
<ul style="list-style-type: none"><li>• <b>Do not apply insecticide or flammable sprays to the controller.</b> Do not place flammable spray near the controller and make sure it does not blow directly on the controller as this may cause in fire.</li></ul>	

## 2 . Product Features

The central controller is capable of controlling up to 50 air conditioner units. It supports the following operating function.

### [ 1 ] User operating function

#### (1) Operation

1. Virtually almost functions operated by local remote controller are supported.  
The central controller can be used to control the indoor units in specific group ON or OFF, select the operating mode (COOL, DRY, FAN, AUTO and HEAT) for the indoor unit or HEAT RECOVERY, BY-PASS, AUTO for the ventilation unit), select the fan speed, select the air direction (4 direction and swing operation), select the ventilation mode (OFF, LOW speed, or HIGH speed), select TIMER MODE and select the temperature setting.  
In addition, room temperature can be displayed at the unit of each group upon request.  
(See 5-5 "User setting")
2. Local remote control operation can be prohibited for specific functions.  
Access to specific control functions, such as ON/OFF operation, mode selection ,temperature setting and filter sign reset operation can be prohibited for the local remote controls collectively or per group.
3. Collectively setting  
Operation setting can be performs collectively or per group.

#### (2) Weekly Schedule

1. The weekly schedule enables four different schedule patterns to be set weekly per group. (P1-P4)  
Of these, three patterns are to set ON/OFF schedule and remaining one pattern is to set the pattern to prohibit operation of the local remote controller.  
Four patterns (daily patterns) mentioned above enable the setting of individual schedule times for every group.
2. The respective daily patterns enable the setting of three different ON times (three prohibition times) and three different OFF times (three permission times).  
In addition, it is possible to set ON time only (prohibition time only) and OFF time only (permission time only).
3. Easy setting  
Daily operation patterns and weekly schedules for one group can easily be copied to the other groups.
4. Timer automatic recovery operation when recovering from a power down is supported.

#### (3) Operating status monitor

1. ON/OFF/MALFUNCTION status can be monitored by group or by unit.
2. The groups managed by the central controller may be displayed all together by group number or group name (first three characters). Collective display of all unit address is also supported.
3. When displaying all groups at once, individual groups can be turned ON or OFF by designating them by the ▷ indicator .

#### (4) Malfunction monitor

1. The unit address where the malfunction occurred, the error code and address of the unit that detected the malfunction are displayed on the malfunction monitor screen.
2. Pressing the reset key stops all the units connected to the same group, refrigerant system or linked group to the unit where the malfunction occurred, all of these are reset.

## [ 2 ] System configuration setup and maintenance function

### (1) Setup for system configuration

1. Registration can be made for the indoor units, local remote controllers and slave system controllers in the same group.  
And also registration can be made for the ventilation such as OA processing unit.
2. Group name may be specified. ( Names may include alphanumeric characters.)
3. Group name may be copied.
4. Setting of group configuration and specifying the group name may be performed as long as power is being supplied to the central controller. This mean that setting can be performed before the central controller is installed at the site, before installation of individual units is completed or while the power supply to some units is cut off.
5. System configuration data setting in the central controller can be deleted at once if necessary when replacing circuits wired board, etc.

### (2) Refrigerant system monitor

All unit address (indoor, outdoor, etc.) can be displayed for individual refrigerant system on the refrigerant system monitor screen. This information is useful for checking the installation, such as address setting, transmission line connection and power supply connection.

### (3) Interlocked group setting

Setting can be performed for indoor units interlocked with a ventilation unit.

If even one of the indoor units interlocked with ventilation have started to operate, the ventilation will be activated.

### (4) Malfunction log monitor

1. A log of the last 64 malfunction message, in the order in which they occurred, can be monitored.
2. The data and time the malfunction occurred, the address of unit where it occurred, the error code and the address of unit that detected the malfunction are displayed.
3. All malfunction logged in the memory of the central controller and indoor unit can be reset at once.

## [ 3 ] Other

### (1) Overall statues display lamp

Displays normal operation/all OFF/malfunction status for the entire system.

(Normal operation/all OFF/malfunction status is indicated by the lamp being lit, not lit or blinking respectively)

### (2) Collective ON/OFF switch

This switch allows turning all of the unit in the system ON or OFF at once.

### (3) Power supply wiring

The central controller is supplied power from the PAC-SC50KUA Power Supply Unit via the M-NET transmission line and DC power line. The DC power between the PAC-SC50KUA Power Supply Unit and the central controller should be 10m or less. The central controller allows to be connected to M-NET transmission line at any position. (M-NET transmission line is the central control line which connects TB7 terminal of the outdoor unit)

### (4) M-NET transmission line

The combined maximum distance between the outdoor units and the central controller, and between the outdoor units and farthest indoor units connected to the same refrigerant system or their remote controller, may be extended up 500 meters.

Therefore, even if the total distance is made longer by installing the outdoor units all in row, there will be no problem so long as the above maximum total distance limitation is not exceeded.

### 3-1 Specifications

Item		Specification	
Source power requirement	Input voltage	DC24V,0.02A(Maximum loading) Power received from PAC-SC50KUA Power Supply Unit via M-NET transmission line. DC12V,0.2A(Maximum loading) Power is received from the PAC-SC50KUA Power Supply Unit via the DC power line.	
Environmental condition	Temperature	Operating            0 °C ~ +40 °C / 32 °F ~ +104 °F Non operating    -20 °C ~ +60 °C / - 4 °F ~ +140 °F	
	Humidity	30~ 90%RH (No condensation)	
Dimensions	mm	120(H) × 300(W) × 80[*19](D)	*[ ] : indicate the thickness from the wall.
	in	4-3/4(H) × 11-13/16(W) × 3-1/8[*3/4](D)	
Weight	Kg	1.0	
	lb	2-1/4	
System condition			
Number of control unit    *3		Indoor unit or independent OA processing unit or LOSSNAY : 50 units maximum (50 groups maximum) Number of units (indoor or independent OA processing unit or LOSSNAY) in one group : 1-16 units *Note    Indoor unit, independent OA processing unit and LOSSNAY can not register to the same group. Number of remote controllers in one group : 1-2 Number of system controllers in one group : 0-4 (including the number of remote controller in one group) : 0-3 for groups which have one remote controller. Number of indoor units interlocked with one OA processing unit or LOSSNAY : 0-16 (some types of OA processing unit can only be operated when interlocked to a maximum of 9 units)	
User operating function			
Operation	ON/OFF	The ON/OFF operation can be performed as a collective or per group.	
	Operation mode            *1	The switch operation for the operation mode setting can be performed as a collective or per group. [ Selectable operation mode for the indoor unit ] Cool/Dry/Fan/Auto/Heat [ Selectable operation mode for the independent ventilation ] Heat recovery/By-pass/Auto	
	Fan speed            *1	The switch operation to set the High and Low speed can be performed as a collective or per group. ( The 4 fan speed setting is available to the indoor that has 4 levels )	
	Air direction and swing operation    *1	The air flow direction can be switched to 4 directions and swing operation as a collective or per group	
	Temperature setting	Temperature setting can be performed collectively or per group. [Setting temperature range] Cool (Dry) operation       : 19 ~ 30 °C / 67 ~ 87 °F Heat operation               : 17 ~ 28 °C / 63 ~ 83 °F Auto operation               : 19 ~ 28 °C / 67 ~ 83 °F	

Item		Specification
Operation	Prohibit local remote control	The specific functions of a local remote controller can be prohibited as a collective or per group. [Prohibit function] ON/OFF operation, Operation mode setting, Temperature setting and Filter sign reset operation.
	Timer operation	The set schedule operations can be switched to ON/OFF (local remote controller operation prohibition/permission) for each group.
	Filter sign reset	The filter sign reset operation after the air filters are cleaned can be performed as a collective or per group.
	Ventilation operation *1 *3	The ventilation operation of the interlocked OA processing unit or LOSSNAY can be collective or per group. [Ventilation operation] Low speed/High speed/Ventilation OFF
Monitor	Collective operation	The overall status lamp displays conditions of the collective statuses.
	Each group operation	Each group operation is displayed on the operation setting screen (group) or operation monitor screen.
	Operation mode	Displayed on the operation setting screen (group).
	Fan speed	
	Air direction	
	Temperature setting	
	Timer operation	
	Filter sign	
	Local remote control prohibition	
	Ventilation operation *3	
	Room temperature display	
	Central control prohibition	
	External input signal condition	
	Malfunction	The unit address and error code are displayed on the malfunction monitor screen when a malfunction occurs.
Other	Current time back-up	When the power is cut off, the current time is backed up for approximately one week. (When the controller is fully charged. The controller is fully charged by twenty-four hours after power feed.)
	Timer setting	<p>Operation pattern setting can be performed.</p> <ul style="list-style-type: none"> <li>• Operation interval : Minimum 10 minutes</li> <li>• The daily operation pattern and weekly schedule for each group can be set.</li> <li>• A pattern of one day : P1/P2/P3/<b>P1</b> / <b>P2</b> / <b>P3</b> / <b>P4</b> / - <ul style="list-style-type: none"> <li>* ON/OFF setting up to three times a day are possible for P1/P2/P3.</li> <li>* <b>P4</b> enables to set operation prohibition of 3 times per day for the remote controller.</li> <li>* <b>P1</b> / <b>P2</b> / <b>P3</b> implement the schedule which has combined P1/P2/P3 of ON/OFF pattern and <b>P4</b> of remote controller operation prohibition pattern together. (<b>P1</b> = P1 + <b>P4</b> / <b>P2</b> = P2 + <b>P4</b> / <b>P3</b> = P3 + <b>P4</b> is displayed.)</li> <li>* - is a day without timer operation.</li> </ul> </li> <li>• "The reference temperature and set-back value" or "Setting temperature" which are linked with timer operation can be set.</li> </ul>

Item		Specification
Other	Group name designation	Group name can be specified and display on the operation setting screen. * Group name setting is need at the initial setting.
	External signal input interface	Emergency stop/normal, ON/OFF, prohibit/permit for local remote operation can be controlled for units being controlled with a non-voltage contact signal input from an external source.
	External signal output interface	When one or more units being controlled are operating, the "ON" signal will be output, and if a malfunction occurs in one or more units, the "malfunction" signal will be output.
Initial setting (for installation and maintenance)		
Connecting information setting	Group setting *3	The group setting operation for units (indoor units local remote controllers, independent OA processing unit, LOSSNAY and slave system controllers) are performed on the group setting screen.
	Interlocked setting *3	The interlocked setting for the ventilation equipment as the OA processing unit or LOSSNAY , etc to indoor unit is performed on the interlocked setting screen.
Monitor	Malfunction history	A maximum of the 64 most recent malfunction are displayed on the malfunction log monitor.
	Refrigerant system monitor	The connected unit address are displayed on the refrigerant monitor screen.
Other	User setting	Some of the indication and function that appear on the each screen can be specified to match the needs of the user.
	Master system controller/ Slave system controller setting *2	Master/Slave setting of the system controller. * G-50A does not support slaves.
	Prohibition setting enable /disable	The setting of a system controller which the local remote control is prohibition enable or disable.
	The prohibited controller range setting	Selecting of the prohibited controller which is only local remote controller or both local remote controller and the other system controller.
	K-control type *3	The system composed of K-control type air conditioner equipment can be controlled using the K transmission converter (PAC-SC25KAA)

\*1 Each operation is available in accordance with the function of unit.

\*2 Master system controller and slave system controller.

\*3 OA processing unit (LOSSNAY) and the K transmission converter (PAC-SC25KAA) are not included in systems shipped to North America (USA & Canada).

## NOTE :

The following group setting cannot be performed.

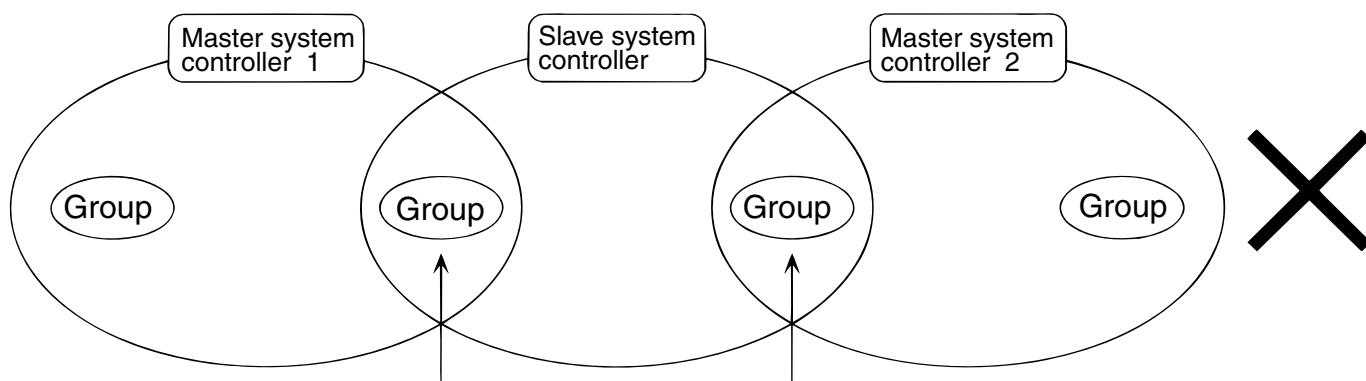

- Unit groups which are not under the management of the master controller and are managed by the slave system controller.

- A common group is managed by more than two master controllers.

- A slave system controller which exceeds the management range of the master system controller of two or more.

3 - 2 Display Screen

## Collective operation switch

If this switch is pressed during the operation, a whole group stop is performed.

The collective operation switch can be performed in the user setting mode for any screen.  
( Excluding menu screen )

## LAN changeover switch

Refer to section "5. Initial setting ( page 25 ) " for explanation of the operation of these switches.

## LCD contrast adjustment knob

## LAN status lamp

Orange LED indicates action and green LED indicates link.

## Service LAN connector

Refer to section "5. Initial setting " for an explanation of this connector.

## Rear side

## Operation panel

LAN(Ethernet)connector

M-NET Transmission line terminal

RS-232C connector

External input / output interface connector  
Refer to section "7. External input / output function ( page 38 )" for the detail of operation of these connectors.

## Interlocked setting function

INTERLOCKED SETTING				
INTERLOCKED UNIT ADDRESS		041		
UNIT ADDRESS				
001	002	003	004	005
006	007	008	009	010
011	012	013	014	015
016				

This function sets either single or multiple indoor units, the LOSSNAY or any other OA processing unit that interlocking operates, as units in the same operation.  
Refer to section "5. Initial settings (page 25)" for detail of operations.

## User setting function

USER SETTING	
1 OPERATION MONITOR	GROUP NO. NAME /UNIT ADDRESS
2 SCHEDULE DATA	SET BACK/SET TEMP
3 FILTER SIGN	NONE INDICATE
4 GROUP NO. DISPLAY	NONE INDICATE
5 2001-1-1/1-1-2001	ROOM TEMPERATURE
6	ROOM TEMPERATURE
7 TEMP. UNIT	°C / °F

The function selections of the display method and timer settings that is displayed on the screen.  
Refer to section "5. Initial settings (page 25)" for detail of operation.

## Refrigerant monitor function

REFRIGERANT MONITOR	
OUTDOOR ADDRESS	5 1
BC/OS ADDRESS	5 2
UNIT ADDRESS

001-6607	(DETECT 000)

A malfunction logging which can store a maximum of 64 items that can be monitored.  
Refer to section "6. Maintenance (page 36)" for detail of operation.

Required function for initial settings

Start-up and maintenance functions

# 4 . User operation

Used the following two screens when user operation is performed.

Operation monitor screen .....

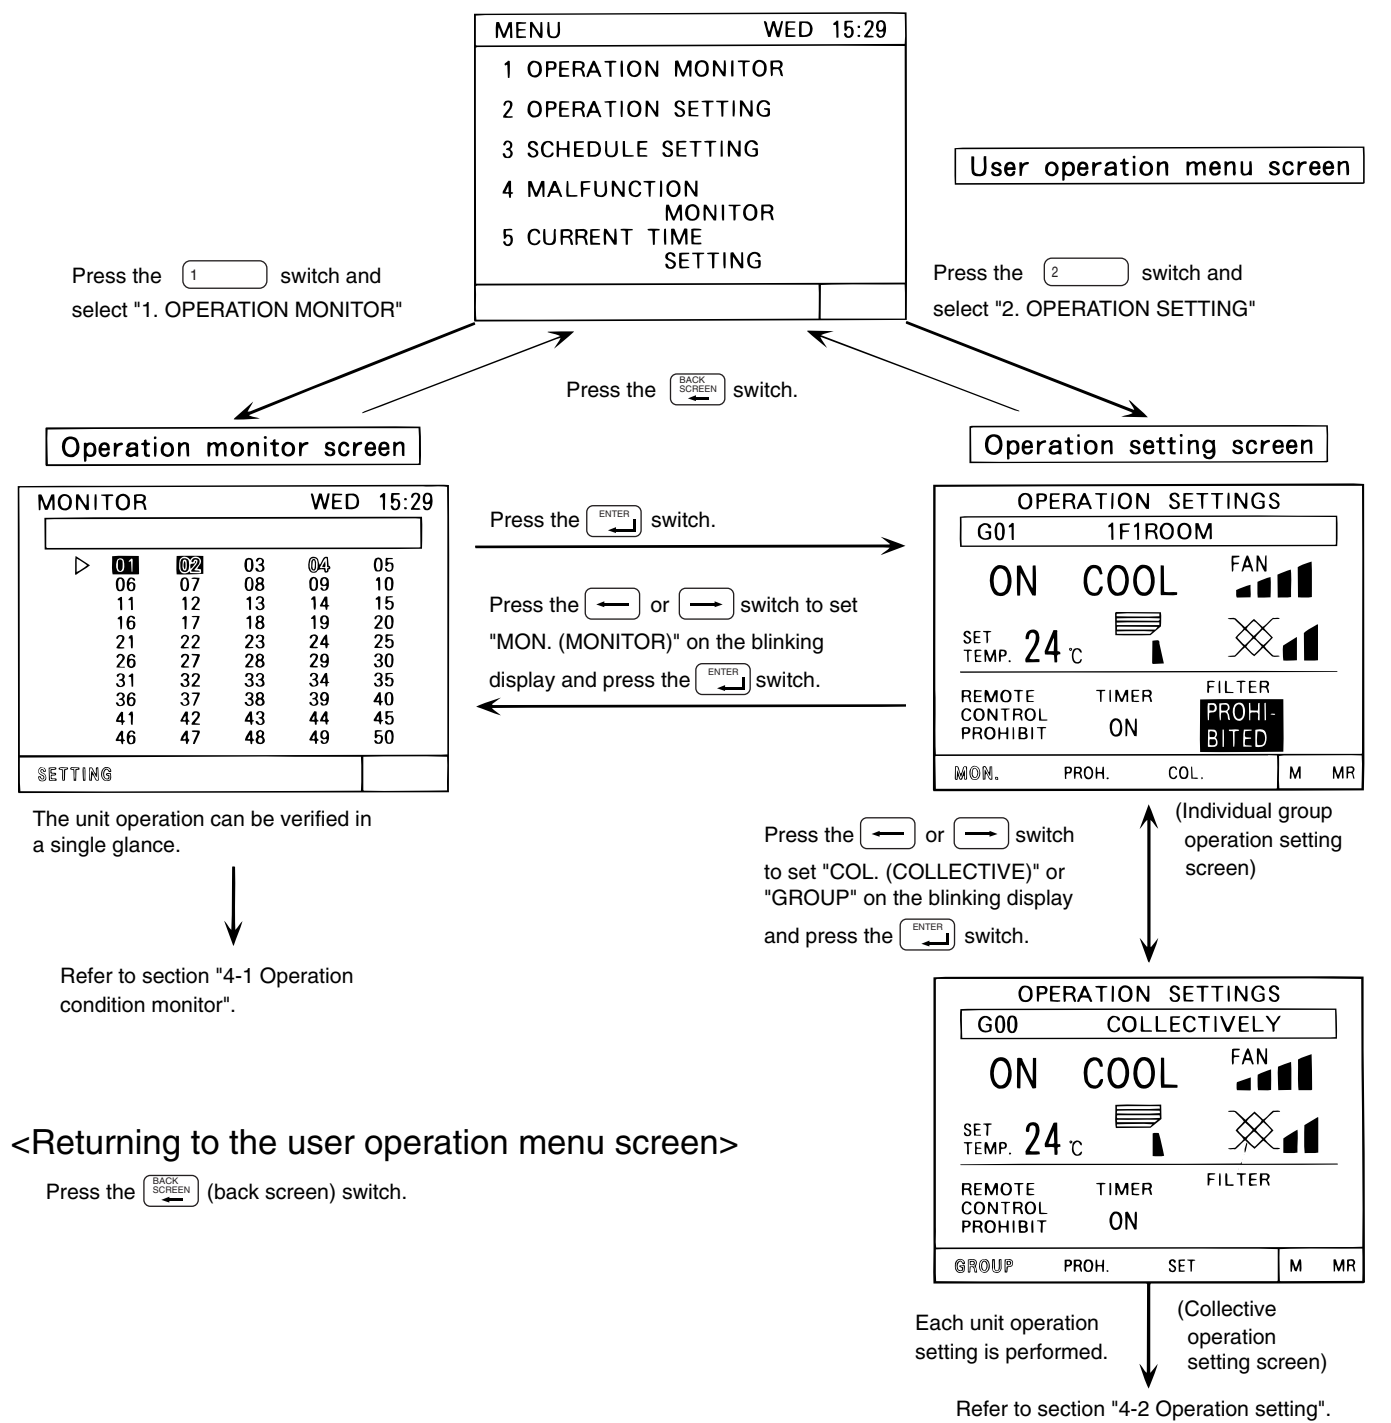

This screen displays ON/OFF and malfunction condition of unit.

Operation setting screen .....

The unit operations can be performed by individual group or collective operation. These operation include the ON/OFF, operation mode, fan speed, temperature setting, air direction, ventilation setting, timer operation ON/OFF, local remote controller prohibition and filter sign reset are performed by group or collectively. In addition, this screen can also displays the room temperature of each group.

- The collective operation can be performed on any screen (except for the menu screen) in the user operation mode

## <Shifting to the operation monitor screen and operation setting screen>

## <Returning to the user operation menu screen>

Press the BACK SCREEN (back screen) switch.

# 4 - 1 Operation condition monitor

- This function displays the ON/OFF/Malfunction status of specific units or group.
- ON/OFF/Malfunction status is shown by the indication corresponding to the unit or group appearing in inverse, normal or blinking display.
- The user may select display items by unit address, group number or group name.  
Refer to section "5-7 User setting (page 34)" for detail of user setting.
- During the user operation mode, this screen returns from any screen if there is no operation for approximately 10 minutes.

## (1) Operation Method

- Note that operation is different for each of the following display methods.

### <Unit address display>

MONITOR		WED 15:29	
G00 COLLECTIVELY			
001	002	03	004 005
006	007	008	009 010
011	012	013	014 015
016	017	018	019 020
021	022	023	024 025
026	027	028	029 030

## Operation panel

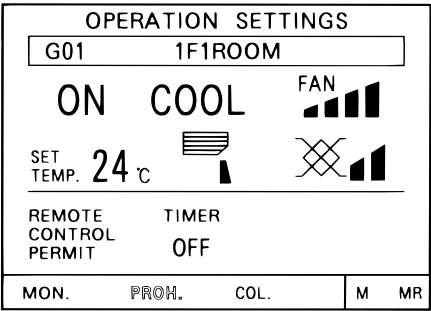

No.	Name of switches	Function	Display
⑤	Current time setting switch	These switches are used when the current time is set.	Refer to section "4-5 Current time setting" .
⑥	Air direction setting switch	The Air flow direction can be selected. The air flow direction can be selected to four directions and swing operation (auto vane).	Air flow direction 
⑦	Ventilation setting switch	The operation mode of the interlocked ventilation can be performed. *Where there is no interlocked ventilation, the operation of this switch is invalid. *"Ventilation" is OA processing unit or LOSSNAY	Ventilation volume setting display 
⑧	Remote operation prohibit switch	Used to prohibit for the local remote control.	PROHIBIT : Local remote control specified on the prohibit setting screen is not possible. PERMIT : Local remote control is possible.
⑨	Timer more switch	The timer operation can be performed according to a previously set operation pattern.	Timer operation display 「ON」→「OFF」
⑩	Reset switch	The filter sign display reset is performed. The reset processing is completed by pressing this switch two times.	Filter display 「Filter」→ No display
⑪	Group select switch	The display group is changed.	Group number display This switch displays 1 ~ 50 group numbers. The switch can also display group names.
⑫	Back screen switch	Use to back to the user menu screen.	The menu screen will be returned.
⑬	Cursor position switch	The position of a cursor can be moved when a cursor is appear.	The cursor position (blinking) moves.

\*1: Room temperature can be displayed by selecting the room temperature display function per "5-7User Setting".( but limited to indoor unit group)

(1) Local remote control operation prohibition setting.

- G-50A can prohibit the operation of item such as connected local remote controller or slave system controller for each group. The prohibit items are ON/OFF operation, operation mode, temperature setting and filter sign reset operation.

- ① Press the switch to display the group that the operation prohibition setting will be performed.
- ② Press the or switch to set "PROH. (PROHIBIT)" on the blinking display and press switch.

- ① The prohibit setting screen is displayed.
- ② Press the operation switch for the items to be prohibited.
- When the ON/OFF operation is to be prohibited : 1
  - When the operation mode is to be prohibited : 2
  - When the setting temperature is to be prohibited : 4 or 7
  - When the filter sign reset is to be prohibited : DEL

- ① The items selected for prohibition are shown in reverse display.
- ② After setting of prohibit item, press the switch to go back to the operation setting screen.

- ① The operation setting screen is displayed.
- ② Press the switch to set "PROHIBIT "ON" .

Remote operation prohibition/permission display will be change「PERMIT」to「PROHIBIT」and the prohibited item set on the prohibit setting screen are shown in reverse display.  
The prohibit setting is completed.

**NOTE:**

- The system controller that performed the local remote control operation prohibition setting can operate the prohibited items.
- When the No.4 function select is set ON, the prohibit setting of the local remote control operating cannot be made. For details, refer to "5-3 Function setting."

(2) G-50A operation prohibition

- The operation of this controller is prohibited when an operation prohibition setting for this controller is received from a system controller other than this controller or when an external input signal is used.

The **PROHI-BITED** is displayed and the prohibition operation is display in re-verse display when operation of this controller is prohibited by another system controller or an external input signal used. The prohibition operation which is displayed in reverse display is not possible to operate in this condition.

(3) Using the function area

To select the function from the function area, use the or switch to move the cursor to the blinking to the function of your choice and press the switch. The current cursor position appears as a blinking indication on screen.

- MON. (MONITOR) : Shift to the operation monitor screen
- PROH. (PROHIBIT) : Shift to the prohibit setting screen
- COL. (COLLECTIVE) : Shift to the collective operation setting screen
- M (memory) : Stores the setting currently shown on the screen in memory.
- MR (memory read) : Reads the setting stored in memory and activates them for the currently displayed group.

4 - 2 - 2 Collective operation setting

- A collective operation setting and a collective prohibit setting can be performed for all the group managed by this controller at one time.

(1) Collective operation setting

① Press the switch to set "COL. (COLLECTIVE)" in blinking display and press the switch on the group operation setting screen.

- ② The collective operation setting initial screen is displayed.
- ③ Select the items for operation setting on the collective operation setting initial screen.  
The operation method is same as described in section "4-2-1 Group operation setting" (Page 12).

**NOTE:** The items which were not set, remain set to the same condition that were set before the collective operation was performed.

- ④ The items selected for the operation blink on the collective operation setting screen.
- ⑤ When all setting are completed, press the switch to display the "SET" in blinking display for the indicated function area.
- ⑥ Press the switch one time to complete this setting.

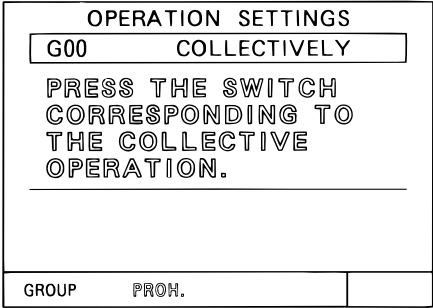

The collective setting is executed.  
The collective setting takes approximately 20 seconds.

The collective setting is completed when the previous items light. (After the setting are completed, start from step ③ to perform operation again if change operation are required.)

**NOTE:** The display of setting contents is erased when shift to another screen.

(2) Collective prohibit setting

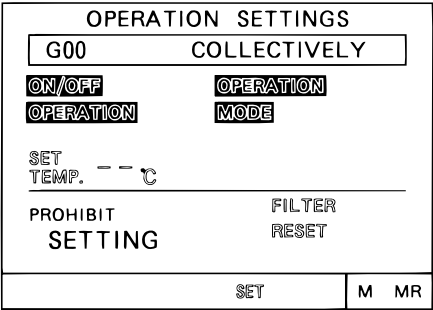

① Press the switch to set "PROH. (PROHIBIT)" in blinking display and press the switch on the collective operation setting initial screen.

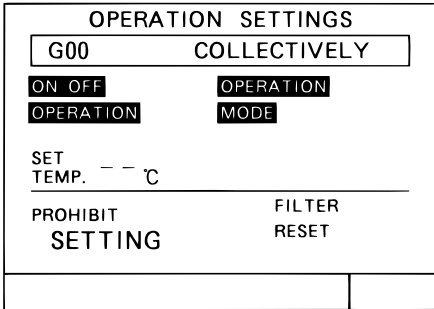

② The collective prohibit setting initial screen is displayed.

③ Select the items to be prohibited or permitted on the collective prohibit setting initial screen.  
Each time to press the switch corresponding to the prohibition item, the prohibition or permission is selected.  
Prohibition setting : The prohibited item is displayed in reverse with blinking.  
Permission setting : The permitted item is displayed with blinking.  
The selection method concerning to prohibit/ permit item is same as described in section "4-2-1 (1) Local remote control operation prohibit setting". ( page 14 )

④ The items selected for the prohibition or permission are displayed with blinking.  
And the "SET" is displayed with blinking in the function area.

⑤ When all setting are completed, press the switch one time to complete this settings.

⑥ The collective prohibit setting is excused.  
The collective prohibit setting takes approximately 20 seconds.

⑦ The collective setting prohibition/permission item setting is completed when the previous item light.

⑧ After setting of prohibit/permit items, press the switch to back to the collective operation setting initial screen.

⑭The collective prohibit setting is completed when the remote operation prohibition/permission display is change to be light.

**NOTE:**

- The display of setting contents is erased when shift to another screen.
- The following restrictions in the collective operation settings.
  1. Temperature setting  
The range that can be set falls within 19°C ~ 28°C /67°F ~ 83°F regardless of the operation mode.
  2. Operation mode selection, fan speed selection, air direction, etc.,can be collectively set regardless of the functions of the unit. However, actual setting to a unit without functions cannot be performed.  
To obtain the correct setting contents, refer to the respective group operation setting screens.

# 4-3 Timer operation

- A weekly schedule setting can be specified for each group.
- Possible to set on the timer the schedule to prohibit operation of the local remote controller in addition to ON/OFF schedule.
- Always set to current time on the current time setting screen when the schedule setting is performed.  
Refer to section "4-5 Current time setting".

**NOTE:** When browser monitoring, or schedule setting from central monitoring PC, was performed, the timer screen of this function cannot be used.  
"This function is set from a higher level." is displayed on this screen.

## <Schedule setting function summary>

- ① The ON and OFF (PROHIBITION and PERMISSION) times can set in 10-minute units.
- ② The daily operation schedule can include up to three ON (PROHIBITION) time settings and three OFF (PERMISSION) time settings.
- ③ Three types (P1-P3) of daily ON/OFF pattern and one type (P4) of prohibition/permission pattern are available respectively, each of which can be set every to each group.  
Week day which is not set in timer pattern is displayed with (-).  
In addition, it is also possible to set the schedule which has combined P1 -P3 and P4 together .  
(**P1** / **P2** / **P3**) In this case, both of ON/OFF pattern and prohibition/permission pattern are daily executed.  
Any one of these options may be selected for each separate day of the week.
- ④ The schedule patterns can be copied easy to other group by the memory and memory read functions because the schedule contents can be recorded in the memory.
- ⑤ The setting temperature or set-back value setting can also be supported during timer operation.

Setting example in case of P4

(2) Set-back values and setting temperature setting

- Setting the set-back values and setting temperature can be performed only when selecting either "SET BACK" or "SET TEMP" on the user setting screen in the initial setting mode.

• Set-back operation

Set-back operation is a method which reduces the air conditioner running cost by controlling the operation with specified time band for lowered load. In other words the unit operates at a few degrees higher for cooling and a few degrees lower for heating in the specified time band.

《EXAMPLE》 When the reference temperature is 24°C / 75°F and the set-back value is set to 2°C / 4°F.

- Cooling operation : 24°C+2°C=26°C / 75°F+4°F=79°F
- Heating operation : 24°C-2°C=22°C / 75°F-4°F=71°F

• Setting temperature operation

This operation sets the temperature when timer ON is set to a predesignated temperature regardless of the operation mode.

# 4 - 4 Malfunction

- The malfunction monitor function is used for conforming to the details of the malfunction condition when a malfunction is displayed on the operation monitor screen.
- The malfunction monitor function can display data describing up to nine malfunctions in the address number sequence on one page. This data contains the unit address where the malfunction occurred, the error code and the unit address where the malfunction was detected.
- After checking the unit address where the malfunction occurred and the error code, please contact your dealer or technical representative as soon as possible.

## < Shifting to the malfunction monitor screen >

**NOTE :** When there is no malfunction taking place, [ NO ERROR ] lights up instead of [ ERROR CODE ].

## Page change operation

- The page change operation is performed by the [←] [→] [↑] [↓] switch.
- Pressing the [→] or [↑] switch shows the current display page +1.
- Pressing the [←] or [↓] switch shows the current display page -1.

## Malfunction reset operation

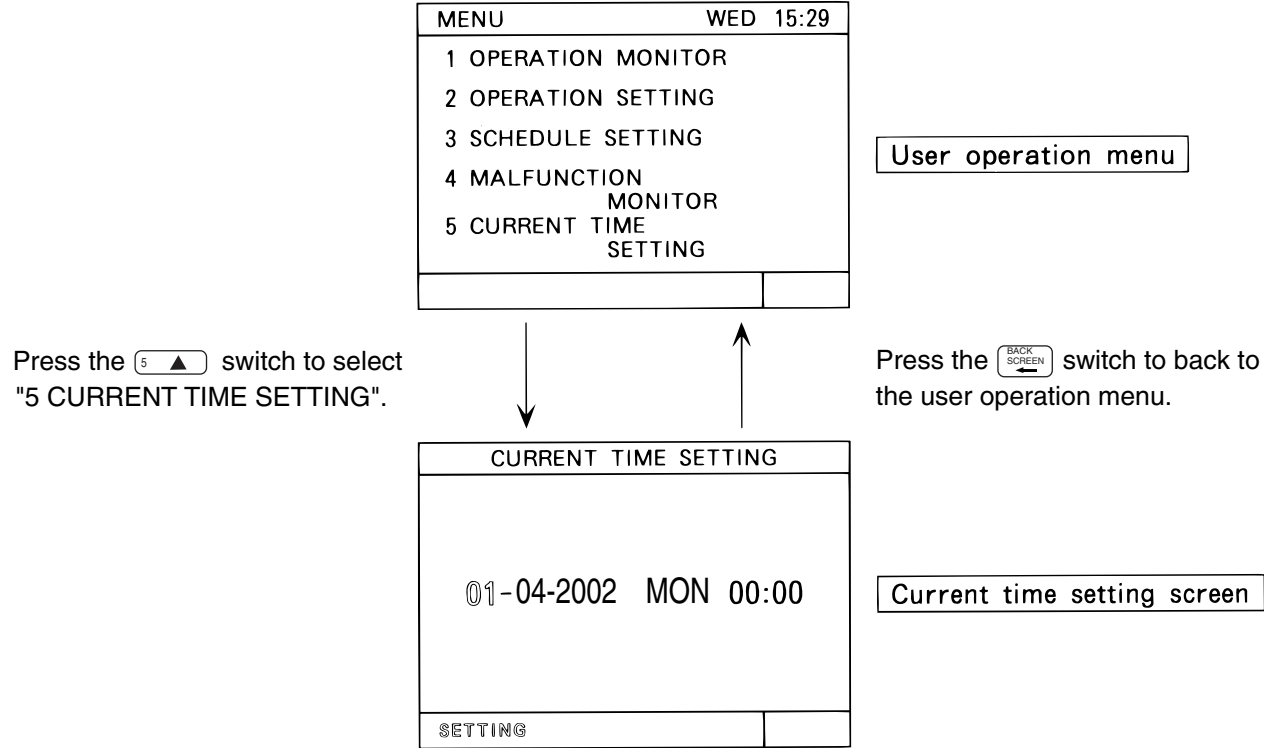

- Press the reset [RESET] [DELI] switch to reset all malfunctions.
- The reset operation can be performed on any page.

**NOTE :** When operation of the G-50A is prohibited, reset operation is invalid.

# 4 - 5 Current time setting

The current time, day, month and year are set on the current time setting screen.

< Sifting to the current time setting screen >

CURRENT TIME SETTING	
15-04-2002 MON 00:00	
SETTING	

- ① Press the switch to move the cursor position to be set.
- ② Press the (CLOCK/PATTERN) switch to set the number or day that is displayed.
- ③ Repeat operations ① and ② to set the date day, month, year and time.
- ④ Where all setting have been completed, press the switch.

CURRENT TIME SETTING	
15-12-2002 SUN 12:34 done	
SETTING	

- ⑤ The current time setting is executed and "done" is displayed with blinking for two seconds to indicate the current time setting completed and the clock count will start with the second reset to 0.

# 5 . Initial setting

## 5 - 1 Shifting to initial setting menu

- Shift to the initial setting menu by continuously pressing + (2seconds or longer) on the user operation menu screen.(Refer to section "3-2".)
- Shift to the user operation menu by continuously pressing + (2seconds or longer) on the initial setting screen (Refer to section "3-2".)
- When group information is not saved, the following initial setting screen is displayed when power is turned on at this controller.

MENU	WED 15:29
1 ADDRESS SETTING 2 FUNCTION SELECT 3 IP ADDRESS SETTING 4 GROUP SETTING	
PLEASE SET INITIAL SETTING	

## 5 - 2 M-NET address setting

- (1) Select "6.ADDRESS SETTING"(or "1.ADDRESS SETTING").
- (2) Set the controller address by pressing the to switches.(000,201 ~ 250).
- (3) When the switch is pressed after setting, the screen returns.

- When the controller is shipped from the factory, the address is set to "000".  
(Always set the address to "000" When the K transmission converter is managed.)

**NOTE :** Observe the following precautions when this controller manages the M-NET models and K control models by using the K transmission converter (PAC-SC25KAA).  
Refer to the K transmission converter instruction manual for further details.

- Address of this controller  
Always set the address of this controller to "000" .
- Function select setting of this controller  
Always set the No.3 function setting to ON.
- Indoor unit address  
Set all the M-NET models of indoor units from 001, next, set the address of the K control indoor unit.

Indoor unit address	001 M-NET indoor unit maximum address → K control indoor unit minimum address ~ 050
---------------------	---

\* The K transmission converter (PAC-SC25KAA) is not included in systems shipped to North America (USA & Canada).

# 5 - 3 Function setting

- The functions of this controller are set according to the function settings.
- The functions selects are set to OFF when the controller is shipped from the factory.

- (1) Select  "7.FUNCTION SETTING"(or  "2. FUNCTION SETTING").
- (2) Switch the function by pressing the function No. you want to change, or the  to  switch of the same number.

Each time the switch is pressed, the ON/OFF state of that No. is switched. (NO. 1 and NO. 2 cannot be changed.)

<Operation example>

- 1)When Input  switch was pressed.

- (3) When the  switch is pressed at the end of function switching, the screen returns.

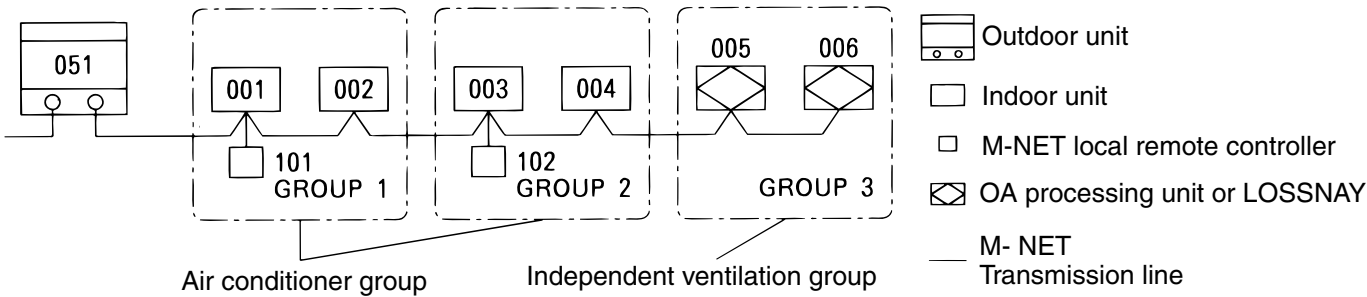

<Function selects>

- |       |                                    |   |   |
|-------|------------------------------------|---|---|

- Item 6. Room temperature indication
- "INDICATE" : Indicated every each group
  - "NONE" : Not indicated every each group
- Item 7. Temperature unit
- "°C" : Setting Centigrade
  - "°F" : Setting Fahrenheit

# 5-8 IP address setting

- This function allows setting of the IP address and mask address needed at LAN connection.

- ① Select the  switch select "8. IP ADDRESS SETTING" on the initial setting menu screen.

- The IP address setting screen appears.
- ② Move the cursor to the address setting position by pressing the , ,  and  keys.
- ③ Set the address with the 0 to 9 numeric switches.
- ④ When all address setting are complete, return to the initial setting menu screen by pressing  switch.

# 5-9 Initial setting tool connection function

- This function connects the initial setting tool PC by LAN.
- Group setting, interlocked setting, and other information can be downloaded to this unit by using the initial setting tool. Refer to the initial setting tool manual for an explanation of the initial setting tool functions and operating procedures.

- ① Remove the cover from the controller by inserting a flat blade screwdriver into the gap between the cover and body and twisting the screwdriver.
- ② Use the dedicated cable (sold separately) to connect the initial setting tool PC to the service LAN connector.
- ③ When changed to FRONT with the LAN changeover switch, the initial setting tool PC is connected to the service LAN connector.
- ④ When setting with the initial setting tool is complete, return the LAN changeover switch to the REAR position.

\*When a service LAN connector is used, the option Model PAC-YG00FA-E is necessary.

# 6. Maintenance

## 6-1 Refrigerant system monitor

- This function allows monitoring of the address of the outdoor units, and BC controller connected to the refrigerant system. It is useful for checking address settings, transmission line connection during installation.

MENU

The malfunction log monitor screen is displayed.

② Changing pages on the malfunction log monitor screen.

Each time this switch is pressed, the current page +1 is displayed.

Each time this switch is pressed, the current page -1 is displayed.

③ Malfunction log reset operation

Press the  switch to clear the malfunction log.

# 7.External input/output function

\* External signal input requires the external I/O adapter (Model : PAC-YG10HA-E) sold separately.

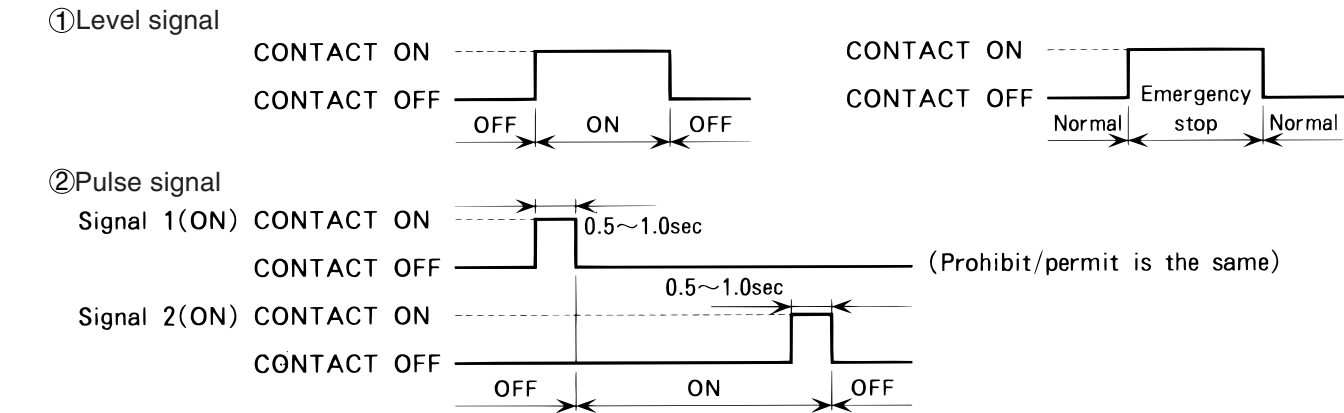

## 7-1 External input function

### (1) The function of external input

- Emergency stop/normal operation, ON/OFF, local remote control prohibit/permit can be controlled for all air conditioners being controlled with a non-voltage contact signal input from an external input source. (Select with the dip switches)
- The condition of external input signal is displayed on the operation setting screen for each group.

No.	Function of external input signal	Function		Remarks
		No.6	No.7	
1	External input signal not used	OFF	OFF	
2	Perform emergency stop with level signal	OFF	ON	During emergency stop, only ON/OFF of the central controller and local remote controller's operation will be prohibit.
3	Perform ON/OFF operation with level signal	ON	OFF	Only the ON/OFF operation of the central controller and the local remote controller will be prohibit.
4	Perform ON/OFF operation,prohibit/permit operation with pulse signal	ON	ON	Set the pulse width while the contact is ON to 0.5 to 1.0 second.

### (2) Level signal and pulse signal

### (3) Specification of external input interface

CN2	Lead wire	Emergency stop/normal level signal	ON/OFF level signal	ON/OFF , prohibit/premit pulse signal
No.5	Orange	Emergency stop/normal input	ON/OFF input	ON input
No.6	Yellow	Not used	Not used	OFF input
No.7	Blue	Not used	Not used	Local remote controller prohibit input
No.8	Gray	Not used	Not used	Local remote controller permit input
No.9	Red	Common(DC12V or DC24V)		

#### (A) Level signal

- ①When the level signal is selected, the operation (only ON/OFF operation) for the central controller and the local remote controller are prohibited (except during normal operation).
- ②When the emergency stop/normal operation signal is selected, the status will be changed from normal operation to emergency stop when the external input signal contact turns OFF to ON, and will be changed from emergency stop to normal operation when external input signal contact turns ON to OFF.
- ③When ON/OFF input signal is selected, the status will be changed from OFF to ON when the external input signal contact turns OFF to ON, and will be changed from ON to OFF when the external input signal contact turns ON to OFF.

(B) Pulse signal

- ①Even if the ON signal is input during ON, the status will remain at the ON status.
- ②When the local remote controller is prohibited, the ON/OFF operation, operation mode selection and temperature setting from the local remote controller is prohibited.
- ③Set the pulse width (contact ON time) to 0.5 to 1.0 second.

7-2 External output function

(1)The function of external output

- The "ON" signal is output when one or more air conditioner are in the ON operation.
- The "Malfunction" signal is output when one or more air conditioner malfunctions.

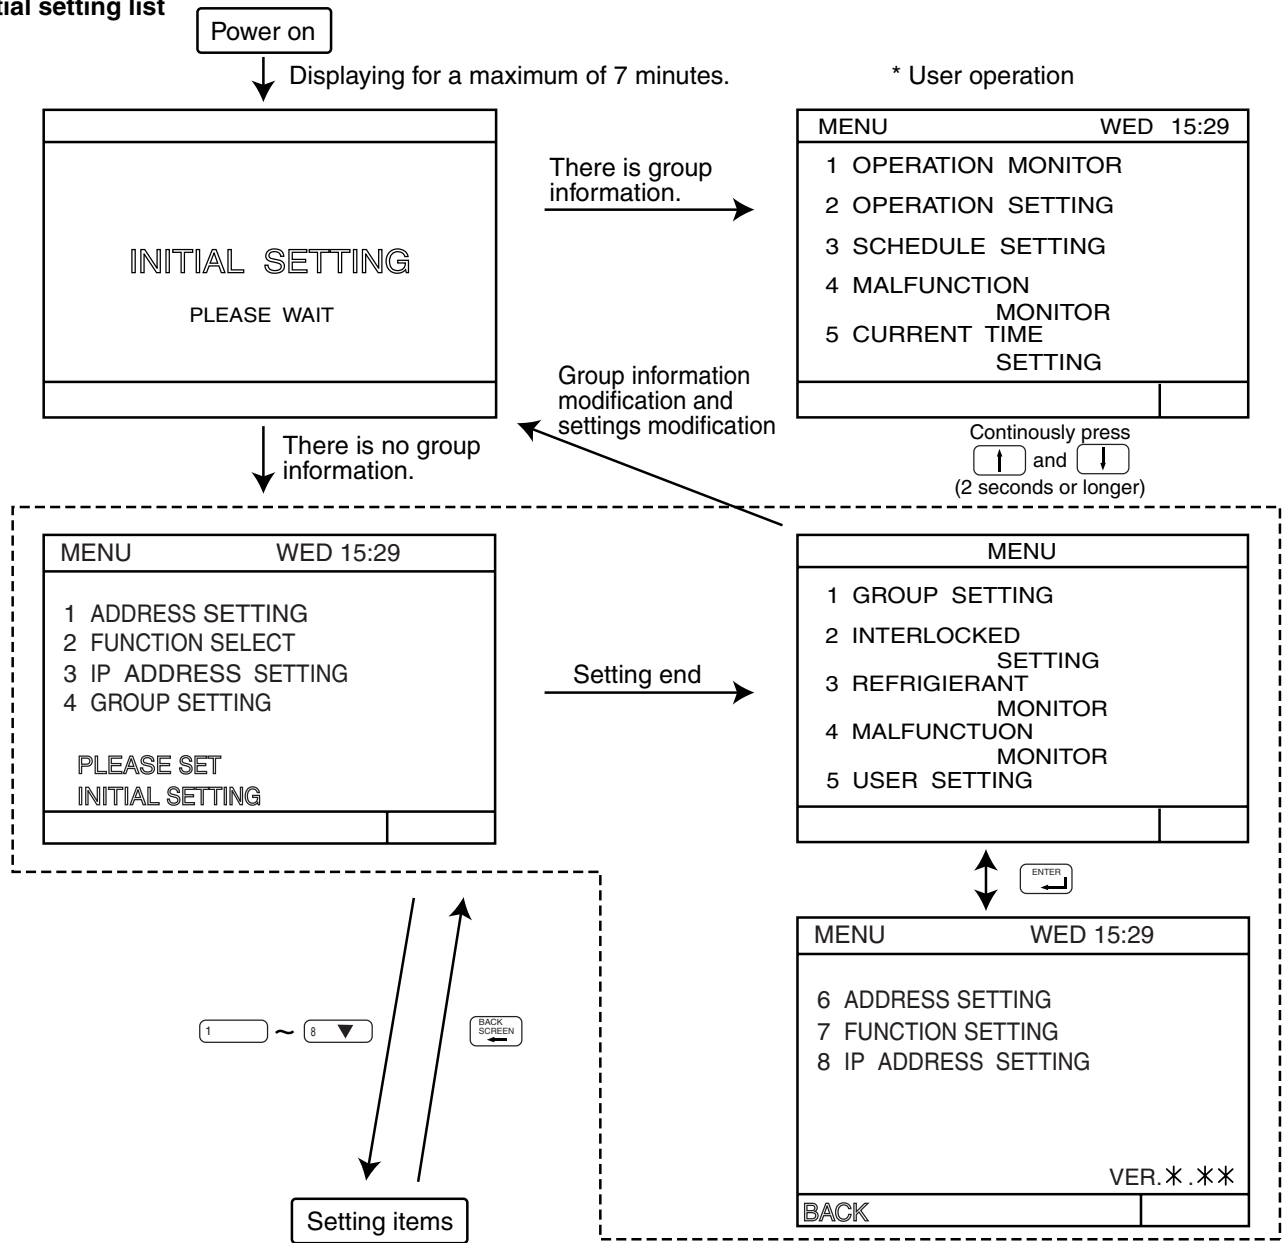

(2)Specification of external output interface

CN2	Lead wire	Description of each terminal
No.1	Green	Common (0V)
No.2	Black	ON/OFF
No.3	Brown	Malfunction/Normal

- ① "ON" signal and "Malfunction" signal will both be output.

This product is designed and intended for use in the residential,  
commercial and light -industrial environment.

The product at hand is  
based on the following  
EU regulations:

- Low Voltage Directive 73/23/EEC
- Electromagnetic Compatibility Directive 89/336/EEC

**NOTE:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio / TV technician for help.
